

## Carbon Monoxide Safety tips.

It's that time of year to have your fuel burning appliances checked by qualified technicians before the cold weather arrives to protect you and your family from Carbon Monoxide poisoning or a fire emergency.

- CO is an odorless, tasteless, invisible poisonous gas that can be fatal when inhaled. You cannot see it, smell it or taste it.
- It is called the "Silent Killer."
- CO is produced when burning any fuel, such as gasoline, propane, natural gas, oil, wood, and charcoal. If you have fire, you have CO.
- Any fuel-burning appliance that is malfunctioning or improperly installed can cause carbon monoxide to seep into the home.

Common sources of Carbon Monoxide in the home.

If you do not have a carbon monoxide detector on each level of your home, it is suggested that you do. Although it is not law, spend a little now to save a lot in the future!
