

Superior Tanker Shuttle Accreditation

**Puslinch Fire & Rescue receives the Fire Underwriters Survey Rating
for Superior Tanker Shuttle Service**

What is the Fire Underwriters Survey Rating?

The Superior Tanker Shuttle Service test administered by Insurers' Advisory Organization (IAO) staff forms part of the Fire Underwriters Survey Rating for the municipality. To achieve the accreditation the Fire Service must be able to:

- Within 3 minutes of the first apparatus (pumper) arriving on the fire scene (test site), be flowing a minimum of 900 litres/minute (200/GPM) of water and
- Maintain the flow uninterrupted for two hours

The test site must be within 8 kilometers of the fire station and must be at least 5 kilometers from the location where the tankers are reloaded.

Upgraded Rating

As a result of successfully completing the test, the Puslinch Fire & Rescue was given the following rating:

- "Superior Tanker Shuttle" listing for residential properties
- "Superior Tanker Shuttle" listing for Commercial properties
- We achieved 2025 litres/minute (450 GPM)

Successfully completed the test indicates that the Puslinch Fire Department is able to effectively transport water to fire scenes throughout our community.

Many insurance companies recognize the Superior Tanker Shuttle. Rural residents may receive a reduction in insurance premiums. Rural residents should contact their insurance agent and ask if they qualify for a rate reduction. Regardless of the potential impact on insurance rates, the Superior Tanker Shuttle means the Puslinch Fire & Rescue demonstrated an ability to transport water to rural fire scenes.

If you are unsure, please contact the fire department for further information or assistance.
